# 1 Introduction

## 1.1 Purpose

This section will give a brief introduction to Pets' Caregiver, including the background of the project, the detailed functions of the systems, the main characteristics of the application, and simple research into similar products.

## 1.2 Project Purpose

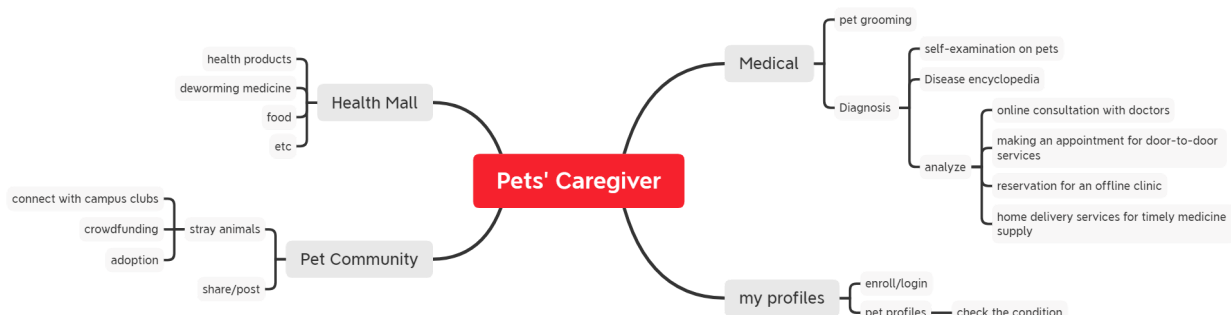

With the continuous improvement of the quality of life, more and more people begin to keep a pet. As the latest White Paper on China's Pet Industry indicates, the market size of pets has reached 206.5 billion in 2020. However, there's still no one app in the market that provides complete medical services for pet owners. Therefore, we want to design an app for pet owners so they can obtain integral services for their pets. In addition, those who don't own a pet can also get recommendations and see cute animals from the Pet Community.

However, the key usability goal of this app is to provide a full range of medical services for pets. This function is still very rare and of great value in the market.

## 1.3 System Functions

This system includes the following functions:

- Medical Services: we design to set *pet grooming* and *pet diagnosis* for medical purposes. In the latter part, we will provide multiple consulting methods, including self-examination on pets, online consultation with doctors, making an appointment for door-to-door services, and reservation for an offline clinic. We even plan to provide home delivery services for timely medicine supply.
- Pet Community: a platform for pet lovers to share their loving pets and experiences of raising them. Besides, considering the current situation that many universities have stray animals on the campus, we plan to set up an area, especially for them, where we will connect with relevant campus clubs, raise crowdfunding for stray animals, and offer adoption services.
- Health Mall: in the Health Mall, we will provide a list of recommended items for loving pets, like health products, deworming medicine, food, etc.
- Personalized Profile: In each account, we will provide a pet profile for its owner, through which the owner can get personalized notification about the character of his pet(e.g. health condition, the characteristics of the breed)

## 1.4 System Characteristics

---

- Door-to-door drug delivery services based on online consultation.
- Pet files construction to facilitate backtracking.
- A pet community as a communication platform.
- A crowdfunding platform for pet medical expenses.
- Cooperate with some universities' clubs to help build an aid platform for stray animals on campus.
- Build a user platform. Pet owners can set up files for their pets, according to which the platform will provide services like case analysis, regular reminders, and so on.

## 1.5 Product Research

---

So far there is no such comprehensive app that specifies in pet-care on the market, but there are some similar products with imperfect functions, some of which is listed here:

- Pet Doctor (Shanghai PZP Network Technology Co., Ltd.): Provide online consultation for pet doctors, some basic knowledge related to pets, common parenting experience, etc.
- Pet Market (Shanghai Hongge Network Technology Co., Ltd.): Take pet secured transactions as the core, and extend other services like pet supplies, pet insurance, etc.
- Puppy At Home Pet Community (Puppy Home Information Technology Co., Ltd): Pet service community centered on pet foster care, beauty, and information sharing.
- Compared with the above pet service apps, our products are more targeted, and also realize the function of "medical treatment" very comprehensively. There are both beauty and diagnosis&treatment, both self-examination and consultation, both online and offline. Also, community service is provided for users to share tips for keeping pets, such as superior pet products and a caring experience. And you can buy relevant essential items for pet raising through the mall.

# 2 Use case modeling

## 2.1 Actor

The Actors in our product are mainly divided into four parts:

- **Administrator.** The Administrator has the highest power in the whole system, including user management, community governance, doctor certification, and so on.
- **Visitor.** The Visitor represents unregistered users in the system. They can view posts in the community, but can't interact in the community nor consult with doctors unless they register an account.
- **Registered User**

This kind of user already has a legitimate account, and may have different categories as follows:

- **Pet Doctor:** Certified doctors that are able to diagnose animals and make appointments.
- **Store:** Sell goods and deal with feedback from customers.
- **Pet Owner:** Registered accounts with a complete pet profile. They can seek help from veterinarians, as well as post in the community.
- **Stray Animal Organization:** Users with a special authentication, representing that they are official organizations for stray animals. They have permission to post information about pets that can be adopted, and raise crowdfunding for homeless pets.

## 2.2 Agile Development and Requirement Analysis

### ■ User Persona

To fully explore the functions of our application, we need to draw some user personas, which are archetypical users whose goals and characteristics represent the needs of a larger group of users. By attaining a deeper understanding of our audience, we can build a more exceptional and innovative product.

The pictures below describe some typical users.

	<b>Goals</b> Find an app that provides online pet health information services. It is best to provide delivery of medicines, and to make appointments for outpatient consultations to reduce costs.
	<b>Quote</b> “You know, although it only takes me about 10 minutes to have a check on my Mimi (the nickname he gives his cat), it takes me two hours to drive back and forth. I love my pet a lot, but it's been getting sick a lot lately, and I'll be exhausted if it goes on like this. If I could communicate with the veterinarian online, I am willing to pay more.”
	<b>Demographic</b> ♂ Male 27 years 📍 China Single
	<b>Background</b> John is a pet lover with a Samoyed and a British Shorthair at home. Although single, he is happy to have two beloved pets by his side. However, recently his cat has been having diarrhea and he needs to go to the hospital frequently. The nearby veterinary hospital is so far away that he needs to drive about an hour to get there.
	<b>Motivations</b> The long distance from the pet hospital greatly increases the cost of pet diagnosis and treatment. Reduce medical costs through online consultation.
<b>Scenarios</b> When his pet is sick, he can ask a veterinarian on his phone through the app. When he wants a veterinarian visit, he can book an appointment through the app. When he wants to buy medicines for pets, the app can provide home delivery services.	

### Goals

Find a community to communicate with pet lovers and pet owners.

Find a way for the school's stray animal club to post information about stray pet adoptions, and provide a platform for crowdfunding when they need treatment.

### Quote

“There are always people who harbor the greatest malice towards pets, but they don't know that pets often need less and give more than they do. Those cute stray cats in the school deserve a better owner.”

### Demographic

Gender \_\_\_\_\_ 19 \_\_\_\_\_ years

📍 Shanghai \_\_\_\_\_

Single \_\_\_\_\_

Tongji University \_\_\_\_\_

### Background

Lisa is a student at Tongji University. She is also a member of a pet club at the school. She likes to feed stray cats at school, watch cute pet-related videos on video sites, and actively participate in club activities. However, on the Internet, she often hears voices that are not friendly to pets; she also does not have a suitable channel for the poor stray pets in the school to be adopted and find a suitable owner.

### Motivations

Let the stray cats and dogs on campus find good owners

Browse pet related posts

Avoid malicious voices on the internet

### Frustrations

lack of suitable platform

There are always malicious voices on the internet

### Scenarios

When she wants to browse pet-related posts and communicate with pet lovers, there is a dedicated platform.

When there are stray animals in the school that are not afraid of people and can be used for adoption, the school organization can publish the adoption information in the special section of the forum.

Crowdfunding can be posted in a dedicated section of the forum when animals in schools need medical treatment (eg, neutering).

## ■ User Stories

### ■ One pet lover

Once my pet gets sick, it is difficult for me to judge its symptoms and causes. There is little information about pet diseases on the Internet. It is also troublesome to go to the hospital for consultation. I really want a platform to help me when my pet is sick.

### ■ Another pet lover

I often see stray animals in my city. Since nobody can distinguish them, we can't know when or where they need human help. Can there be any organizations helping us to manage those stray animals?

I hope to provide a platform to help lost pets find their owners. Not long ago, I accidentally lost my dog while walking, and I haven't found it until now. It disturbed me a lot.

### ■ A pet doctor

When I worked in the pet hospital, there aren't lots of pet owners visiting. Many pets cannot get effective treatment when they are ill for various reasons, such as convenience or price. I always think online consultation is a perfect alternative for offline treatment, because the owners can treat their pets by following the doctor's advice. All you need is to judge what kind of diseases the pet gets.

### ■ Campus pet club

We often find injured pets on campus, but we lack relevant professionals to treat them. Even some experienced students find it difficult to determine the cause of pets. The evaluation of relevant pet products in the market is also deficient, so it is difficult for us to identify what is good.

## ■ Enabler Stories

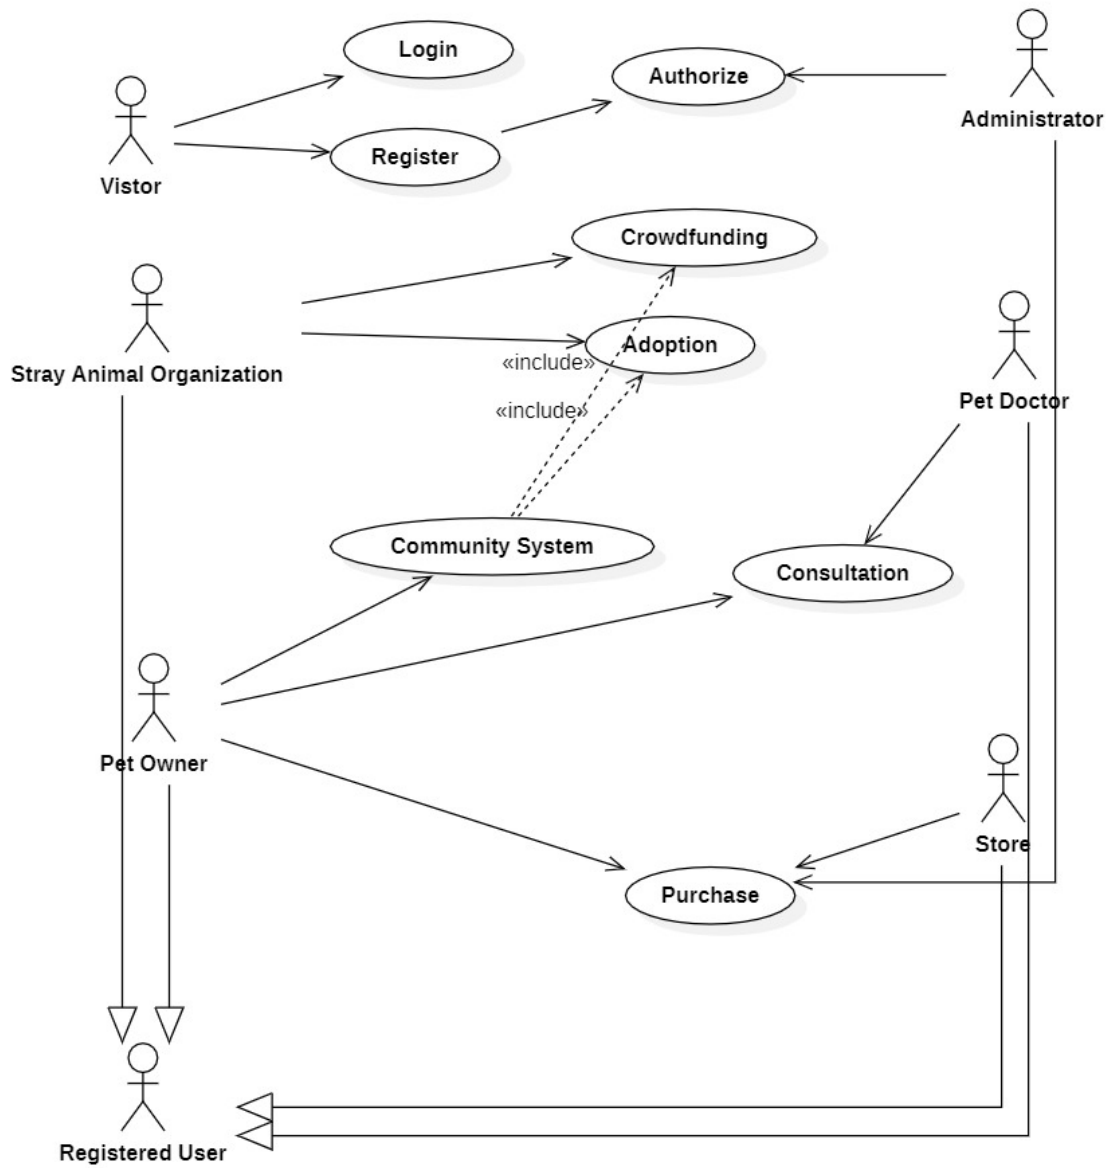

- Provide a platform for pet owners to determine the diseases of pets. It should contain common pet diseases and their characteristics, as well as corresponding solutions.
- Establish an online consultation system, where pet owners can consult pet doctors without visiting certain pet hospitals. Doctors can earn some medical expenses in this system.

- Set up a special pet mall, which sells pet products only. And each customer can comment on the products for other buyers.
- Give the public a platform to help stray pets find their owners where they upload the pets' photos and users can choose which pet to adopt.

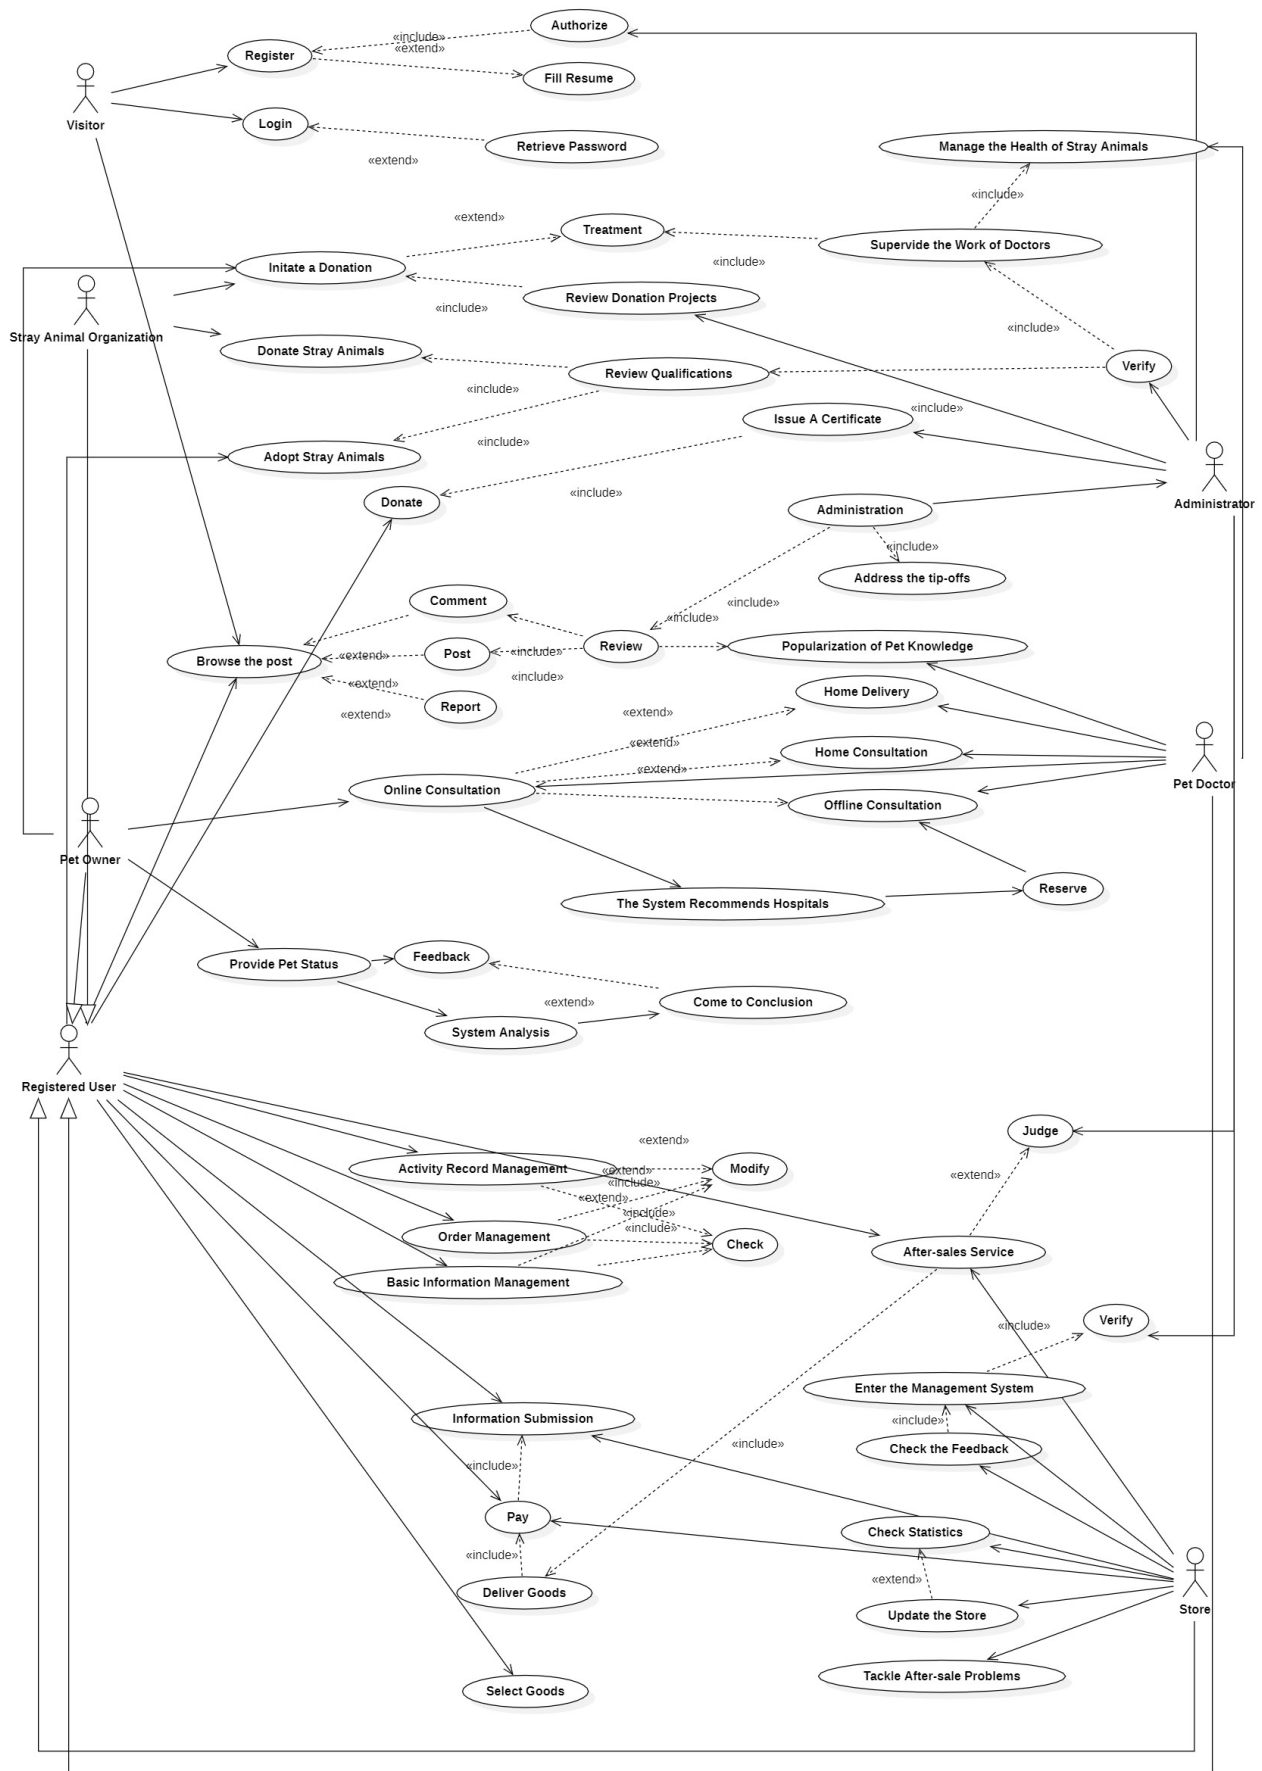

## 2.3 Necessary Use Case Diagrams

This is an overall view of our product on top level:

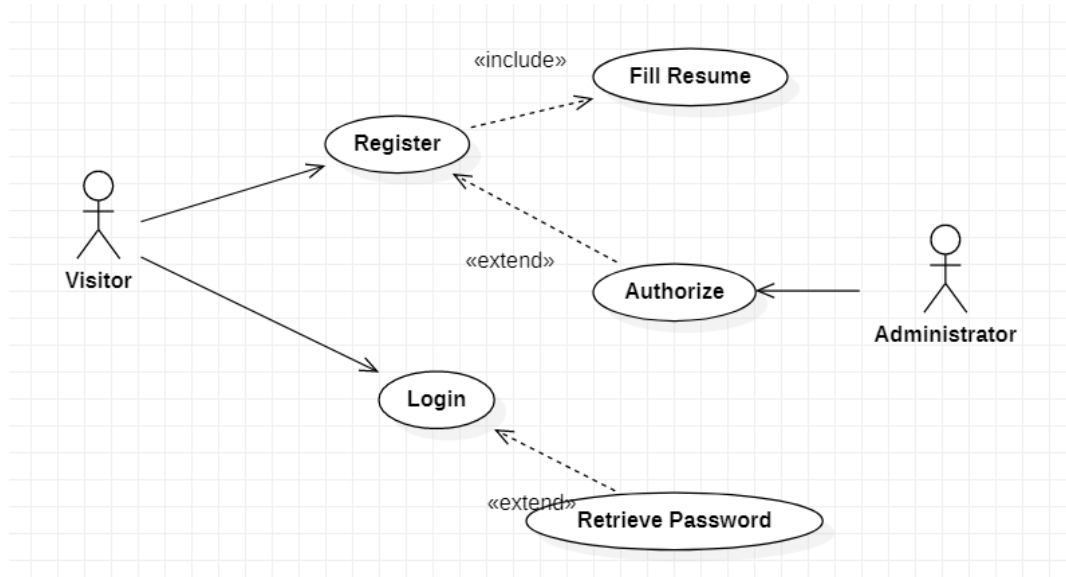

This is a more detailed view of the product:

## 2.4 Detailed Use Cases

1. Me

### Use Case Diagram

### Detailed Specification for Use Case

Use Case: Register

Use Case	Register
ID	UC01
Specification	Visitors register their own account and fill their own basic information; System gives authorization according to the type of the account, including owners and stores.
Actors	<b>Registered User, Administrator</b>
Pre-condition	Visitors enter the login webpage for the first time and click "sign in".
Basic Path	<ol style="list-style-type: none"><li>1. Visitors enter the website.</li><li>2. Visitors click "sign up".</li><li>3. Visitors fill basic information:<ol style="list-style-type: none"><li>3.1 Visitors fill cellphone number\email.</li><li>3.2 Visitors set username and password.</li></ol></li><li>4. Visitors click "send verification code" and fill the code from text or email.</li><li>5. Visitors successfully create an user account.</li></ol>

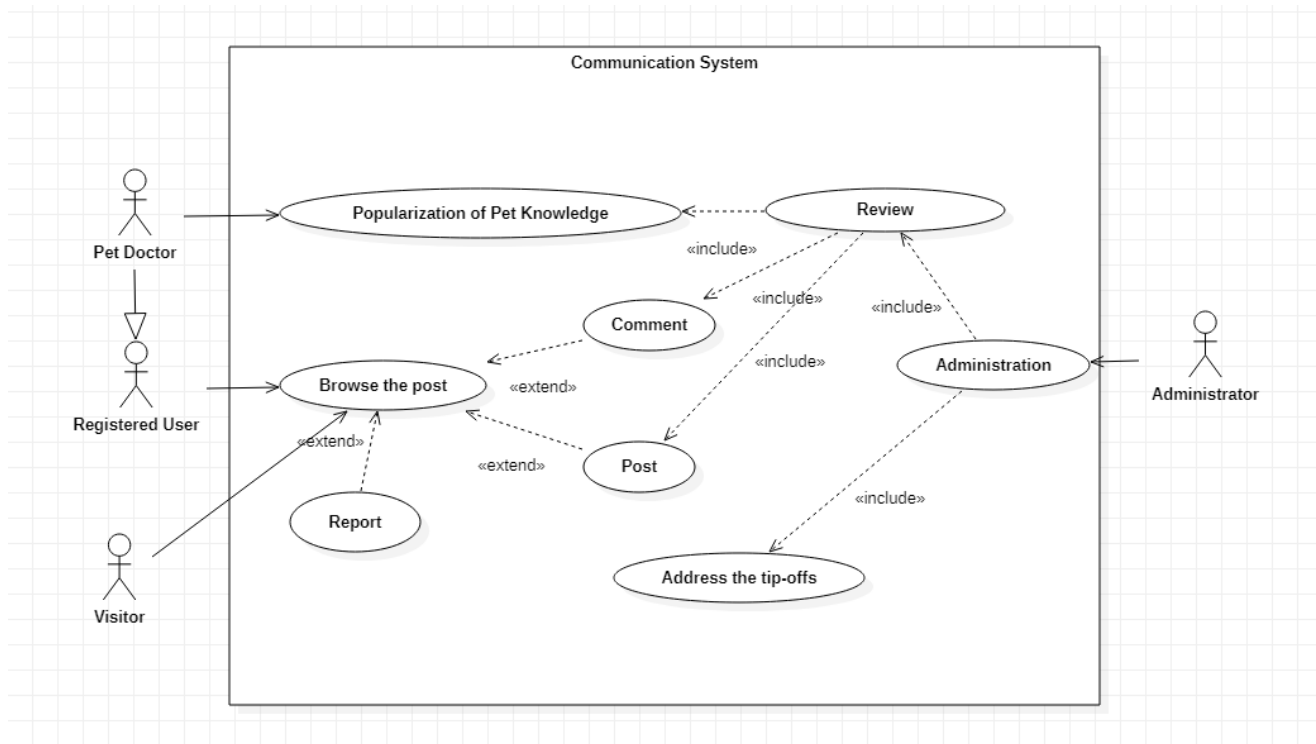

Use Case	Register
Alternative Path	<p>1.If the Visitor actually want to register as a store: The information of the person above should be the director of the store and it still need to fill store name/store type and more rigorous and detailed person in charge information.</p> <p>2. Visitors exit the webpage during the information filling system will show a notification:"Information filling incomplete, do you want to exit anyway?"</p> <p>3. Visitors have problems during creating the account:</p> <p>3.1 Visitors input illegal cellphone number\email\, system will show notification:"Sorry,illegal cellphone number\email\school ID"</p> <p>3.2 Visitors don't receive verification code system will allow visitors to resend the verification code again after 60s countdown.</p> <p>3.3 Visitors input wrong verification code system will show notification:"Sorry,wrong verification code,please input again."</p>
Post-condition	Visitors get their personal or store account and authorization.
special requirements	None

Use Case: Login

Use Case	Login
ID	UC02
Specification	Registered User type account ID and password to login the account. System provides extend services such as retrieving password.
Actors	<b>Visitors</b>
Pre-condition	Visitors have their own authorized account.
Basic Path	<p>1. Visitors enter the website.</p> <p>2. Visitors click "login".</p> <p>3. Visitors fill username and password into the webpage blanks.</p> <p>4. Visitors successfully login.</p>
Alternative Path	<p>1. Visitors input wrong account information:</p> <p>1.1 If Visitors input invalid account ID, system will reject login,show notification"Sorry,account doesn't exist,please input again".</p> <p>1.2 If Visitors input wrong password, system will reject login,show notification "Sorry,wrong password,please input again".</p> <p>1.3 If Visitors input wrong password for 5 times, system will ban visitors from logging in for 3 minutes.</p> <p>2. Visitors click "forget password?" system will handle the request,send a verification code base on the account's cellphone number\email. Visitors can input the verification code and reset the password.</p>
Post-condition	Visitors enter the system, become Registered Users and can access more operations.
special requirements	None

## 2. Communication System

### Use Case Diagram

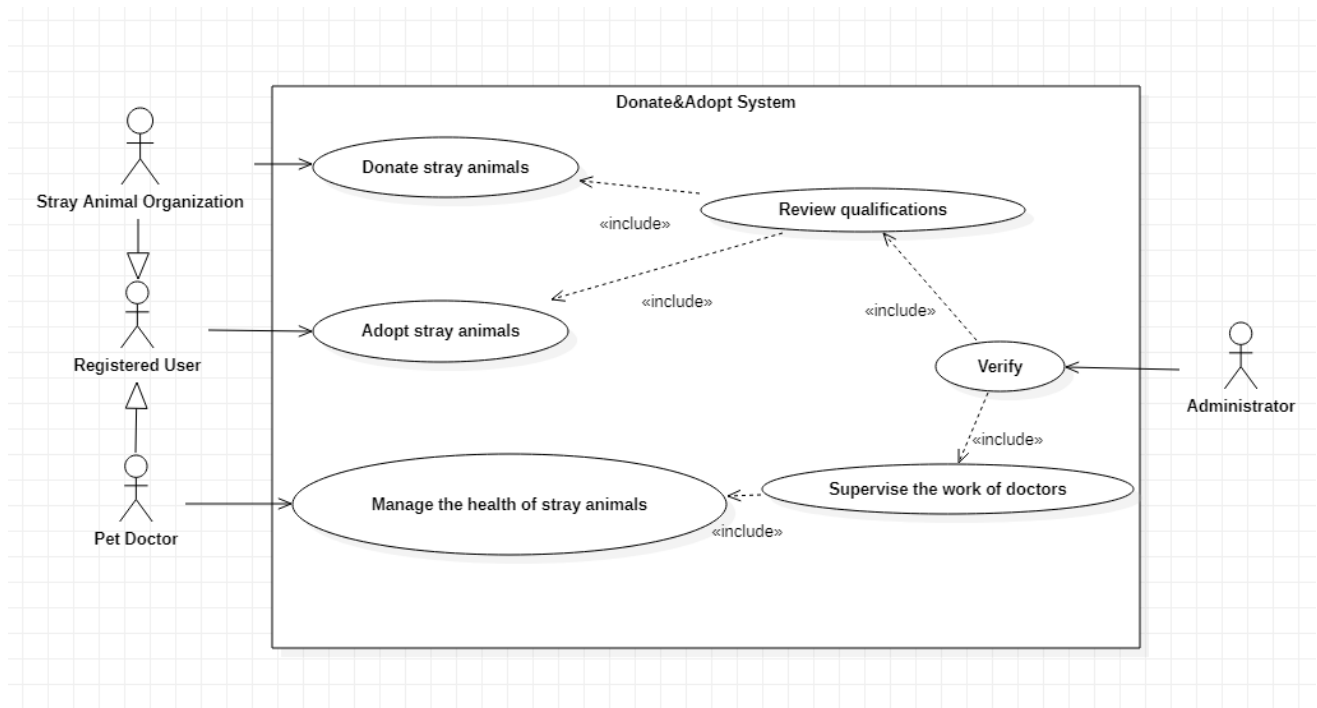

### Detailed Specification for Use Case

Use Case: Communicate in this system

Use Case	Communicate
ID	UC03
Specification	Allow all users to browse the post, make some comments and report some illegal information. Doctors can carry out additional dissemination of knowledge to website users. The administrator will process the reported information and review various comments and posts
Actors	<b>Registered User, Pet Doctor, Administrator</b>
Pre-condition	User in the community webpage.
Basic Path	<ol style="list-style-type: none"><li>1. The use case starts when the User wants to browse the post to catch some information</li><li>2. The user can post, comment on some posts, and report some illegal information. Pet Doctors can publish some additional knowledge posts</li><li>3. The system sends these to the administrator</li><li>4. The administrator reviews these comments and posts</li><li>4.1 If the information is legal, publishing is permitted</li><li>4.2 If the information is illegal, publishing is rejected</li></ol>
Alternative Path	<ol style="list-style-type: none"><li>1. Users cannot find posts that interest them</li><li>1.1 Users can post such posts to get attention</li></ol>
Post-condition	<ol style="list-style-type: none"><li>1. User gets the information they need</li><li>2. User posts in anticipation of getting the information they need</li></ol>
Specific requirements	None

### 3. Donate & Adopt System

#### Use Case Diagram

#### Detailed Specification for Use Case

Use Case: Donate stray animals

Use Case	Donate
ID	UC04
Specification	The <b>Stray A**nimal** O**rganization**</b> is allowed to donate stray animals, and the administrator is responsible for reviewing the qualification of the organization.
Actors	<b>Stray Animal Organization,Administrator</b>
Pre-condition	The <b>Stray Animal Organization</b> on the community webpage.
Basic Path	<ol style="list-style-type: none"><li>1. The <b>Stray Animal Organization</b> enters the stray animal donation webpage</li><li>2. The <b>Stray Animal Organization</b> provides qualification and identity certificates and donated animals.</li><li>3. The system sends these to the administrator</li><li>4. The administrator reviews the qualifications and certificates of the organization.</li><li>4.1 If the conditions are met, the donation is permitted</li><li>4.2 If the conditions are not met, the donation is rejected</li></ol>
Alternative Path	None
Post-condition	<ol style="list-style-type: none"><li>1. The donation succeeds. The animals will be handed over to relevant doctors for health management.</li><li>2. The donation was rejected.</li></ol>
Specific requirements	The <b>Stray Animal Organization</b> must have sufficient proof of identity and qualifications

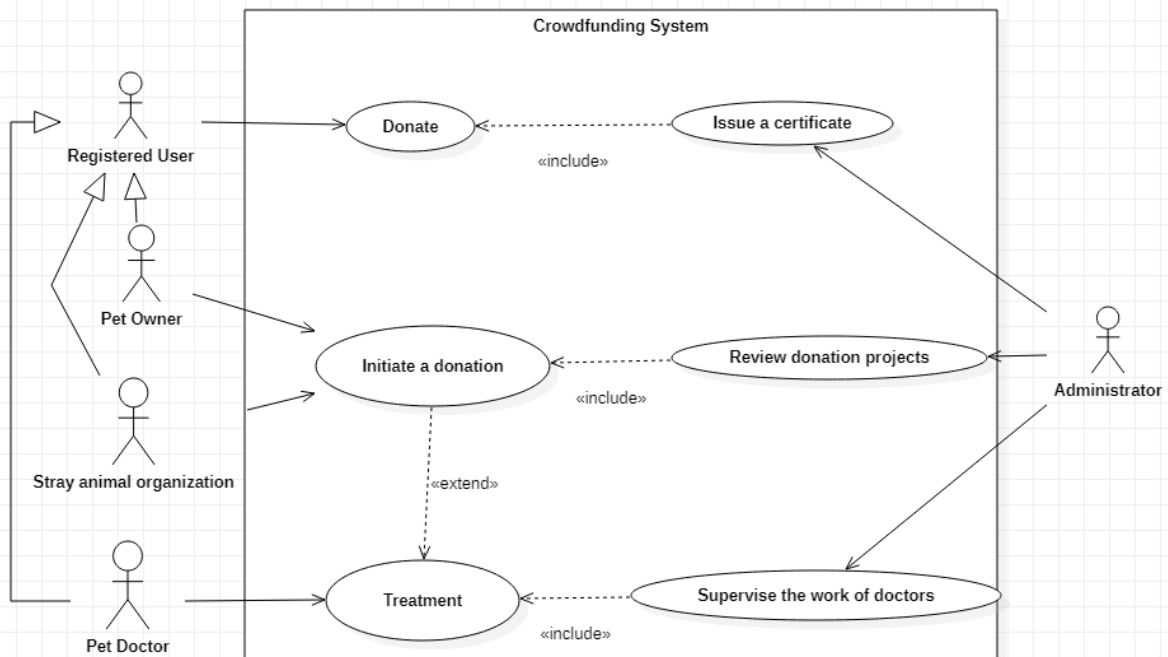

Use Case: Adopt stray animals

## Use Case Diagram

Use Case	Adopt
ID	UC05
Specification	All users are allowed to adopt animals, and the user's eligibility is reviewed by the administrator.
Actors	<b>Registered User, Administrator</b>
Pre-condition	User on the community webpage.
Basic Path	<ol style="list-style-type: none"><li>1. User enters the adoption webpage</li><li>2. User provides relevant personal information and the animal they want to adopt</li><li>3. The system sends these to the administrator</li><li>4. The administrator reviews the user's information as well as the animal's health conditon</li><li>4.1 If the conditions are met, adoption is permitted and the administrator informs the user about the general condition of the animal</li><li>4.2 If the conditions are not met, the adoption is rejected</li></ol>
Alternative Path	None
Post-condition	<ol style="list-style-type: none"><li>1.The user adopts the animal successfully.</li><li>2.The adoption is rejected.</li></ol>
Specific requirements	Users need to have no bad records and certain personal identification.

## 4. Crowdfunding System

### Use Case Diagram

### Detailed Specification for Use Case

Use Case: Initiate a donation

Use Case	Initiate a Donation
ID	UC06
Specification	Pet Owners and Stray Animal Organizations are allowed to initiate a donation. The administrator will review the donation project.
Actors	<b>Pet Owner, Stray Animal Organization, Administrator</b>
Pre-condition	The <b>Pet Owner</b> or <b>Stray Animal Organization</b> on the community webpage.
Basic Path	<ol style="list-style-type: none"><li>1. The <b>Pet Owner</b> or <b>Stray Animal Organization</b> enters the crowdfunding-Initiate webpage</li><li>2. They provide relevant information and the current condition of the animal</li><li>3. The system sends these to the administrator</li><li>4. The administrator reviews the information as well as the animal's health condition<ol style="list-style-type: none"><li>4.1 If the conditions are met, the donation project is allowed to initiate</li><li>4.2 If the conditions are not met, the project is rejected</li></ol></li></ol>
Alternative Path	None
Post-condition	<ol style="list-style-type: none"><li>1.The donation project is initiated successfully.</li><li>2.The project is rejected.</li></ol>
Specific requirements	The material provided by the <b>Pet Owner</b> or <b>Stray Animal Organization</b> needs to be true

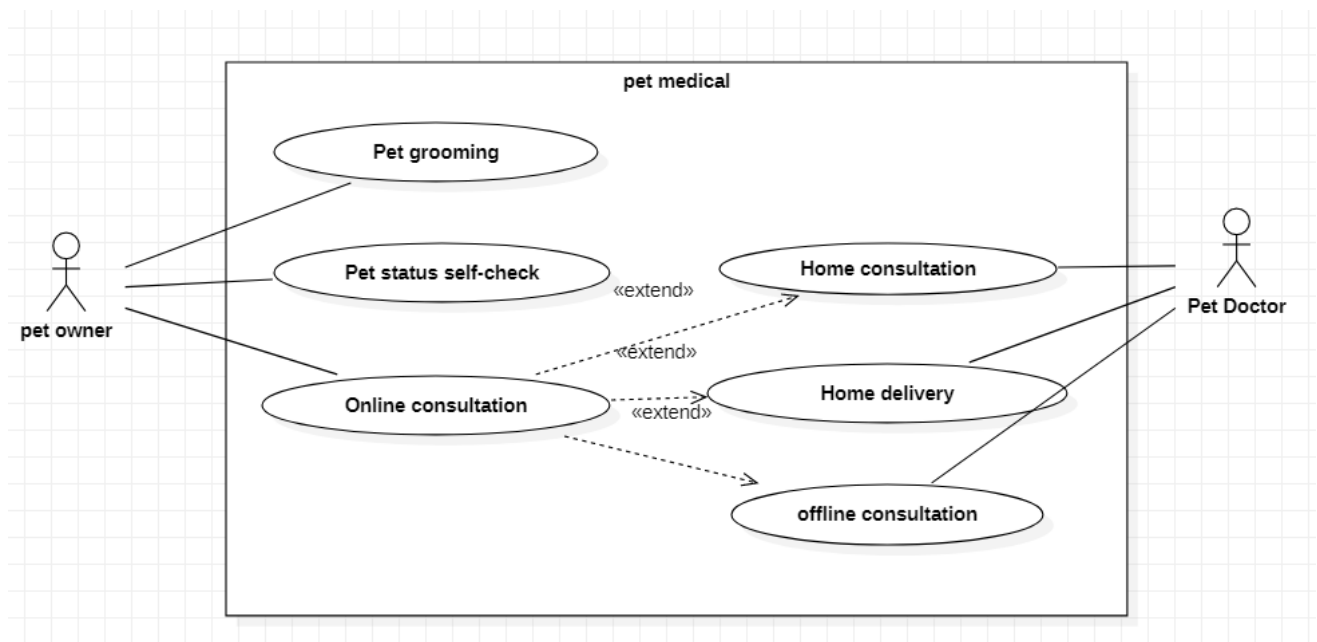

Use Case: Donate

Use Case	Donate
ID	UC07
Specification	All users are allowed to donate to projects they want to help. And the administrator will issue a certificate to the user.
Actors	<b>Registered User, Administrator</b>
Pre-condition	The User on the community webpage.
Basic Path	<ol style="list-style-type: none"> <li>1. The User enters the crowdfunding-donate webpage</li> <li>2. The user provides personal information and the amount of money they want to donate</li> <li>3. The system sends these to the administrator</li> <li>4. The administrator reviewed the information. <ol style="list-style-type: none"> <li>4.1 If the conditions are met, the donation is allowed to be initiated, and the administrator will issue a certificate to the user.</li> <li>4.2 If the conditions are not met, the donation is rejected.</li> </ol> </li> </ol>
Alternative Path	None
Post-condition	<ol style="list-style-type: none"> <li>1. The donation succeeds, and the user gets the donation certificate.</li> <li>2. The donation is rejected.</li> </ol>
Specific requirements	None

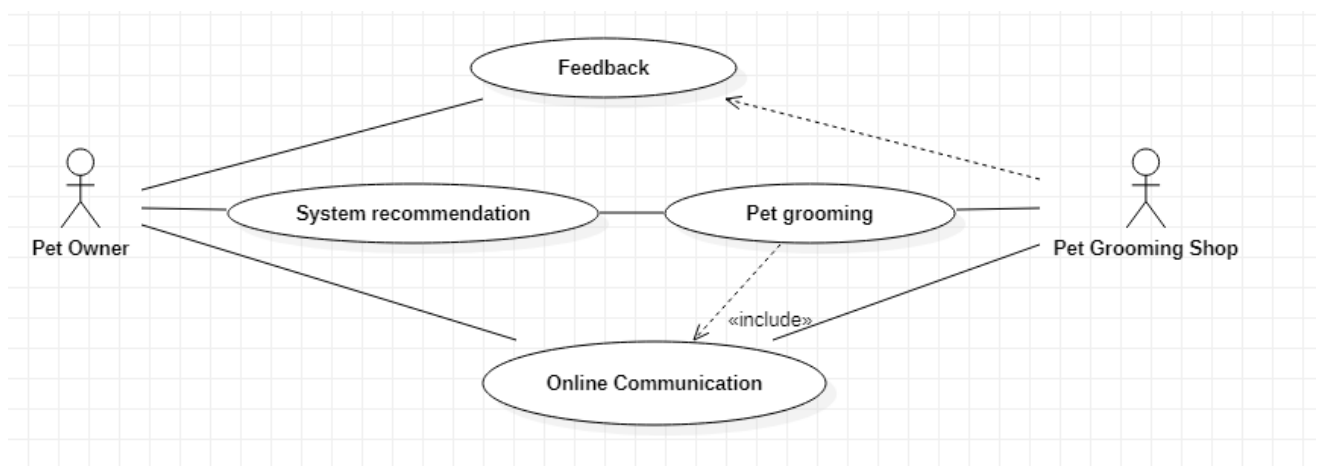

## 5. Medical System

### Use Case Diagram

### Detailed Specification for Use Case

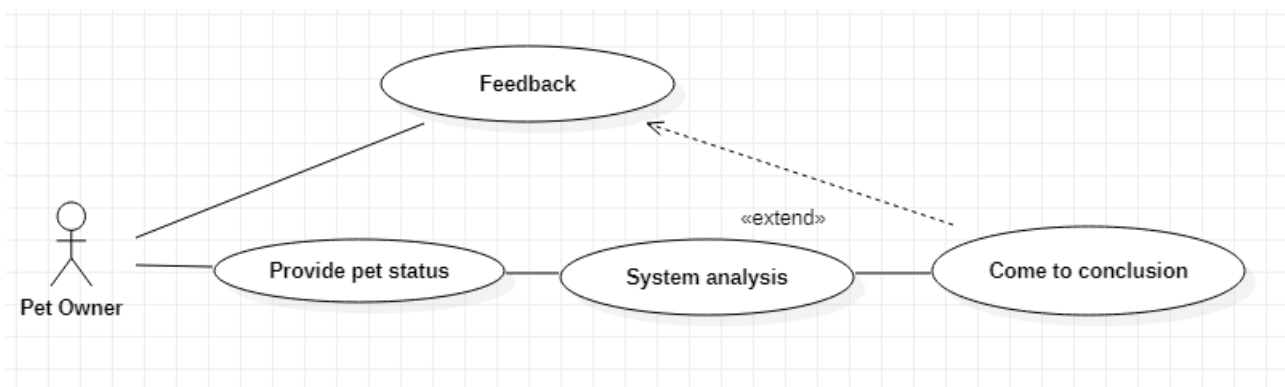

Use Case: Pet grooming

Use Case	Pet Grooming
ID	UC08
Specification	The system will recommend various pet grooming shops to pet owners, and explain the details of each shop (such as location, price, grooming effect), pet owners can choose the one they like to groom their pets.
Actors	Pet Owner, Pet Grooming Shop
Pre-condition	Pet Owners has already filled out a pet profile.

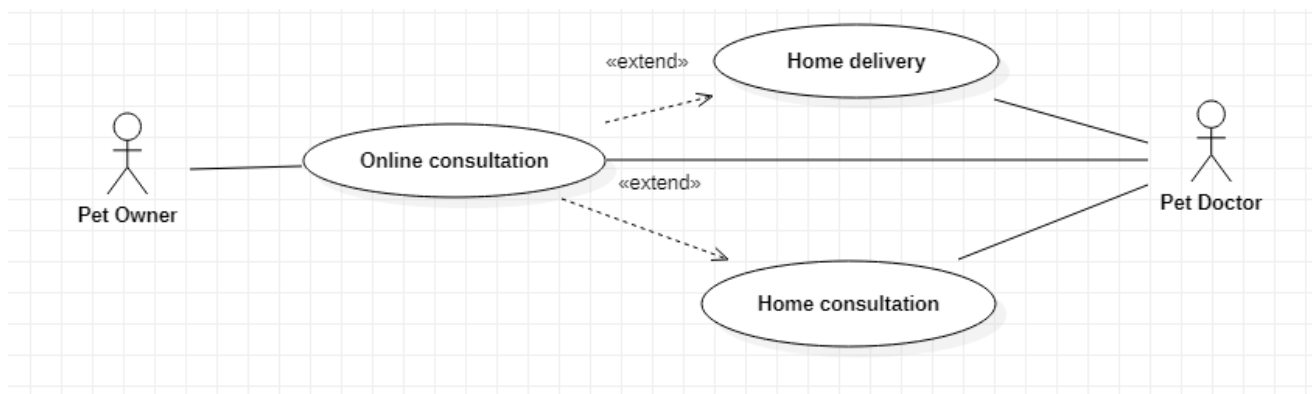

Use Case	Pet Grooming
Basic Path	<ol style="list-style-type: none"> <li>1. The Pet Owner enters the medical service area.</li> <li>2. Pet Owners choose grooming services.</li> <li>3. The system will recommend various pet grooming shops to the Pet Owner according to the pet file filled in by the Pet Owner and explain the details of each shop (such as location, price, grooming effect).</li> <li>4. The Pet Owner can choose the favorite beauty shop according to the recommendation and description of the system and can communicate with the shop owner about the relevant situation.</li> </ol>
Alternative Path	<ol style="list-style-type: none"> <li>1. If the visitor is not registered, the system will remind the visitor to register an account first and fill in the relevant information.</li> <li>2. If the user's pet file is not edited, the system will remind the user to fill in the pet file.</li> <li>3. In the stage of tourists or Registered Users browsing pictures, if the picture cannot be loaded due to the user's network problem or server transmission failure, the system will prompt the user "Network failure, unable to load the picture".</li> </ol>
Post-condition	After users find their favorite beauty shop, the system provides an appointment service. Users can give feedback on the service on the system after making the perfect makeup for the pet.
Specific requirements	None

Use Case: Pet physical examination

Use Case	Pet Physical Examination
ID	UC09
Specification	The system will display a variety of symptoms that pets of this breed are prone to appear according to the pet file and attach a description of the relevant situation. At the same time, pet owners can also directly search for symptoms, and the system will provide relevant examples and explanations.
Actors	<b>Pet owner</b>
Pre-condition	Pet owners need to register an account and fill out a pet profile.
Basic Path	<ol style="list-style-type: none"> <li>1. The Pet Owner enters the medical service area.</li> <li>2. Pet Owners choose diagnosis and treatment services.</li> <li>3. The Pet owner chooses the pet symptom self-examination.</li> <li>4. The system provides examples and descriptions of related symptoms (such as coat color, diet, activity), and Pet owners can also search directly.</li> </ol>

<b>Use Case</b>	<b>Pet Physical Examination</b>
Alternative Path	<ol style="list-style-type: none"> <li>1. If the user is not registered, the system will remind the user to register an account first and fill in the relevant information.</li> <li>2. If the user's pet file is not edited, the system will remind the user to fill in the pet file.</li> <li>3. In the stage of tourists or registered users browsing pictures, if the picture cannot be loaded due to the user's network problem or server transmission failure, the system will prompt the user "Network failure, unable to load the picture".</li> </ol>
Post-condition	The system will provide Pet Owners with grooming or consultation services based on the results found.
Specific requirements	None

<b>Use Case</b>	<b>Door-to-door Service</b>
ID	UC10
Specification	The system will provide pet owners with door-to-door consultation and door-to-door medicine delivery services. This service requires pet owners to apply for door-to-door consultation or door-to-door medicine delivery to the doctor after online consultation, and to reach an agreement with the doctor, in which the system plays an intermediary role.
Actors	<b>Pet Owner, Pet Doctor</b>
Pre-condition	Pet Owners need to register an account, fill in pet files, provide a door-to-door address, and need to consult online. After communicating with the doctor, they can choose to have the doctor visit the doctor or deliver medicine to the door.
Basic Path	<ol style="list-style-type: none"> <li>1. The Pet owner enters the medical service area.</li> <li>2. Pet Owners choose diagnosis and treatment services.</li> <li>3. Pet Owners need to choose online consultation.</li> <li>4. After the online consultation, the Pet Owner can apply to the doctor for door-to-door consultation or door-to-door medicine delivery service.</li> <li>5. If the doctor agrees to the door-to-door service, both the Pet Owner and the doctor need to fill in the agreement form and make a reservation application for the relevant service.</li> </ol>
Alternative Path	<ol style="list-style-type: none"> <li>1. If the user is not registered, the system will remind the user to register an account first and fill in the relevant information.</li> <li>2. If the user's pet file is not edited, the system will remind the user to fill in the pet file.</li> <li>3. During the stage of tourists or Registered Users browsing pictures, if the pictures cannot be loaded due to the user's network problem or server transmission failure, the system will prompt the user "Network failure, unable to load pictures".</li> </ol>
Post-condition	After the door-to-door service, users can give feedback on relevant information, and can make comments on the door-to-door service.

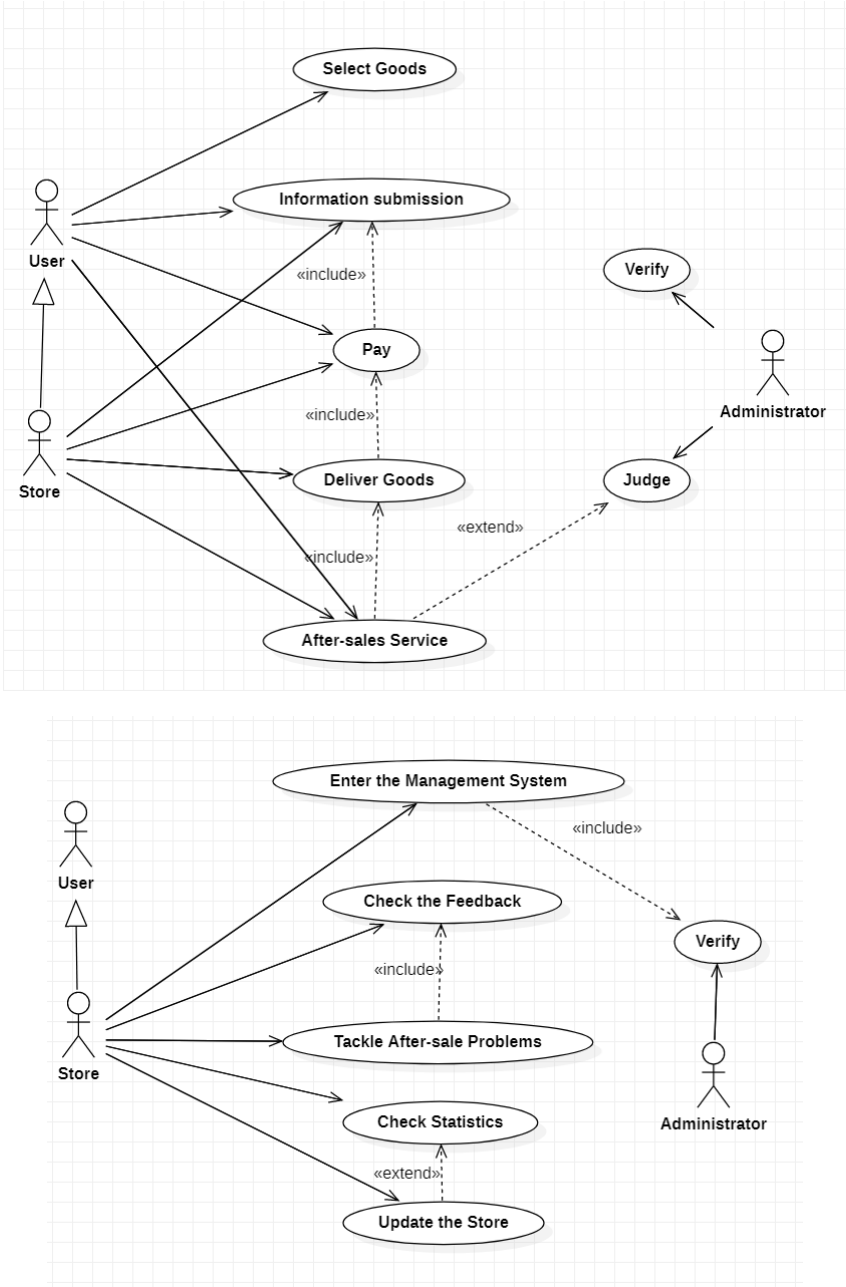

Use Case	Door-to-door Service
Specific requirements	None

Use Case: Pet consultation

Use Case	Pet Consultation
ID	UC11
Specification	The system provides online consultation and offline consultation services. Pet Owners can communicate with doctors online now. If necessary, they can also choose offline consultation. The system will search for nearby pet hospitals and assign them to the hospital. relevant information to pet owners. After choosing a hospital, Pet Owners can make an appointment directly on the system.
Actors	Pet Owner, Pet Doctor
Pre-condition	Pet Owners need to register an account and fill out a pet profile.
Basic Path	<ol style="list-style-type: none"> <li>1. The Pet Owner enters the medical service area.</li> <li>2. Pet Owners choose diagnosis and treatment services.</li> <li>3. Pet Owners can choose online consultation or offline consultation services.</li> <li>4. If the Pet Owner chooses online consultation, the system will recommend multiple Pet Doctors to the Pet Owner, and the Pet Owner can choose a Pet Doctor for online consultation. If the Registered User chooses offline consultation, the system will search for nearby pet hospitals, and Pet Owners can make an appointment directly on the system after selecting a hospital.</li> </ol>
Alternative Path	<ol style="list-style-type: none"> <li>1. If the user is not registered, the system will remind the user to register an account first and fill in the relevant information.</li> <li>2. If the user's pet file is not edited, the system will remind the user to fill in the pet file.</li> <li>3. In the stage of tourists or registered users browsing pictures, if the picture cannot be loaded due to the user's network problem or server transmission failure, the system will prompt the user "Network failure, unable to load the picture".</li> </ol>
Post-condition	After the online consultation is over, the user can make relevant comments on the consultation situation, and can also comment on the doctor. After the offline consultation, users can give feedback and make comments on the hospital's services.
Specific requirements	None

Use Case Diagram

Detailed Specification for Use Case

Use Case: Online Purchase

Use Case	Online Purchase
ID	UC12
Specification	Registered Users purchase goods at health mall online.
Actors	Registered User, Administrator
Pre-condition	Registered Users are located in the health mall to buy goods.

Use Case	Online Purchase
Basic Path	<ol style="list-style-type: none"> <li>1. The user selects the desired product and clicks to enter the purchase page.</li> <li>2. User select product specifications and attributes.</li> <li>3. Click "buy now" or add the product to the shopping cart.</li> <li>4. The user enters the settlement page and fills in the receipt information.</li> <li>5. User orders and payments and funds are temporarily stored in the system platform account.</li> <li>6. The system sends order information to the store.</li> <li>7. The store delivers goods according to the order information.</li> </ol>
Alternative Path	<ol style="list-style-type: none"> <li>1. The user's purchase information is identified as wrong by the system: The system will reject this purchase and remind the user of the wrong information.</li> <li>2.The user's account for payment is abnormal, including insufficient amount and abnormal account status: The system prompts the user to use other payment methods or cancel this purchase.</li> <li>3.The user chooses to cancel the order before paying: The system cancels the order and returns to the purchase page.</li> <li>4.The store failed to deliver the goods on time Inform the user of the situation and cancel the order.</li> </ol>
Post-condition	The user receives the goods successfully and the order is completed, the system will transfer the funds to the store.
Specific requirements	Users need to register and log in. The Administrator supervises the transactions.

#### Use Case: After-sale Service

Use Case	After-sale Service
ID	UC13
Specification	The user requests after-sales service for the purchased goods.
Actors	<b>Registered User, Administrator</b>
Pre-condition	Users have received the goods purchased in the health mall and need after-sales service.
Basic Path	<ol style="list-style-type: none"> <li>1. The user enters the corresponding commodity order page.</li> <li>2. The user clicks "after-sales service".</li> <li>3. Users fill in the "after-sales service inquiry" form of the platform.</li> <li>4. The system submits the after-sales service demand to the store.</li> <li>5. The user negotiates the solution with the store.</li> <li>6. Complete the service.</li> </ol>
Alternative Path	<ol style="list-style-type: none"> <li>1. Negotiation between the store and the user failed: Send the report to the system administrator for review and adjudication.</li> <li>2. The user chooses to withdraw the after-sales service: The system automatically cancels the after-sales service process.</li> </ol>
Post-condition	Users tackle the problems about purchased goods.
Specific requirements	Users must have purchase records of corresponding commodities.

#### Use Case: Store Management

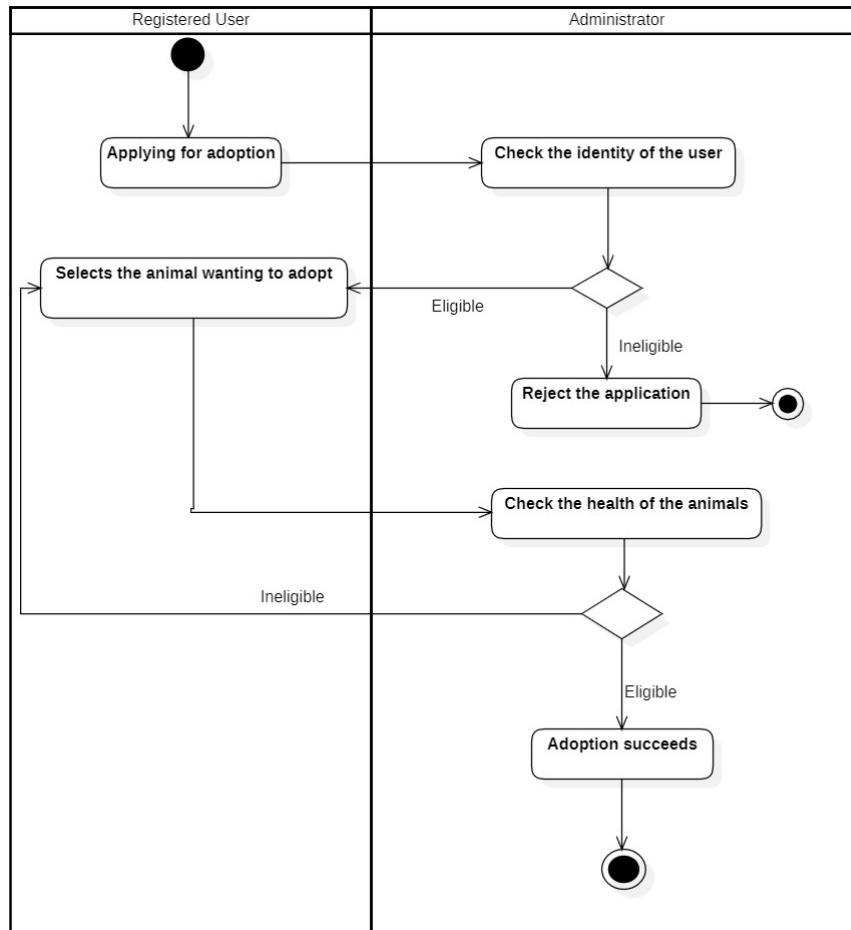

Use Case	Store Management
ID	UC14

Use Case	Store Management
Specification	Store manage their store pages
Actors	Store, Administrator
Pre-condition	Store has successfully registered
Basic Path	<ol style="list-style-type: none"> <li>1. Enter the store management page</li> <li>2. The store can choose to update the goods and change the poster operation.</li> <li>3. Check user feedback and deal with after-sales problems</li> <li>4. View business statistics</li> </ol>
Alternative Path	None
Post-condition	The Store updated its stock, posters, etc.
Specific requirements	None

## 2.5 Necessary Activity Diagrams

### 1. Apply for adoption

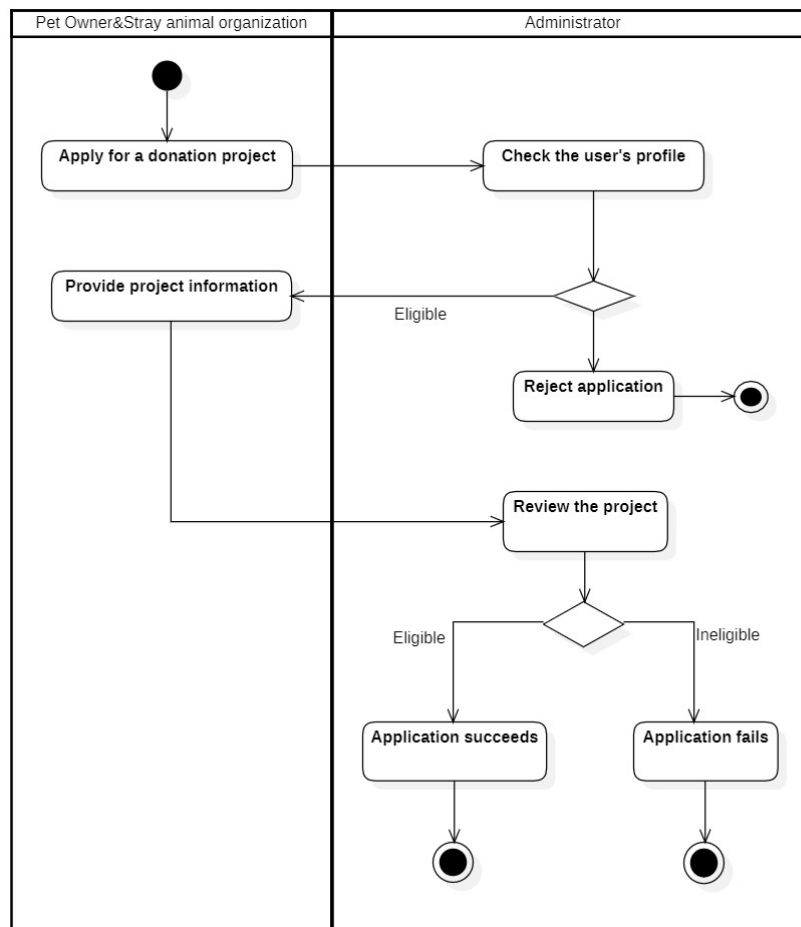

The **Registered User** provides personal data for the administrator to review. If the adoption conditions are met, users can further select the pets they want to adopt. Then the administrator checks the health of the animal. If the conditions are met, the adoption is successful. Otherwise, the user is required to reselect the pet.

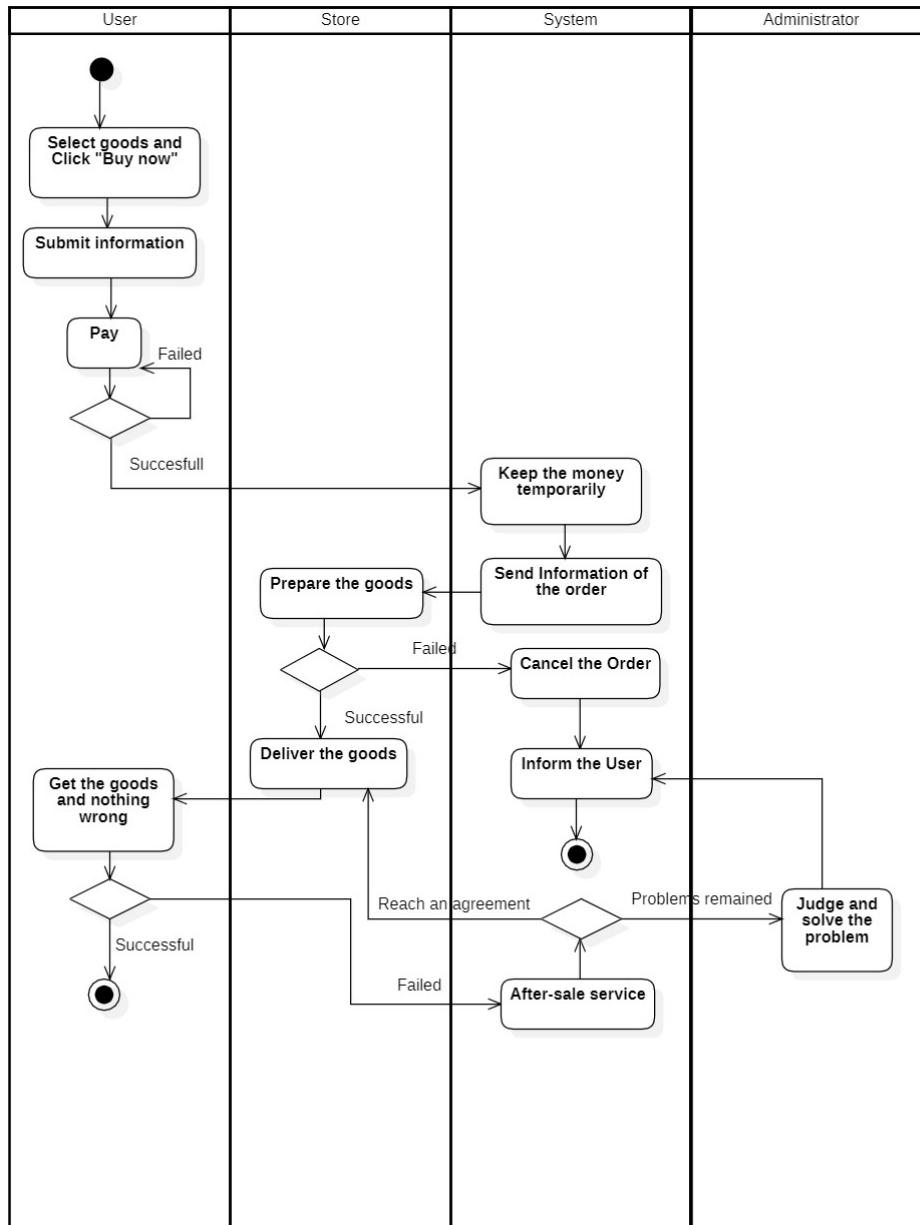

## 2. Initiate a donation

The **Pet Owner** or **Stray animal organization** provides their own relevant information, and the system submits it to the administrator for review. If the conditions for initiating donation are met, users are allowed to provide relevant project information. Then the administrator reviews the information to judge the authenticity of the project. If the conditions are met, the project is successfully initiated; otherwise, it fails.

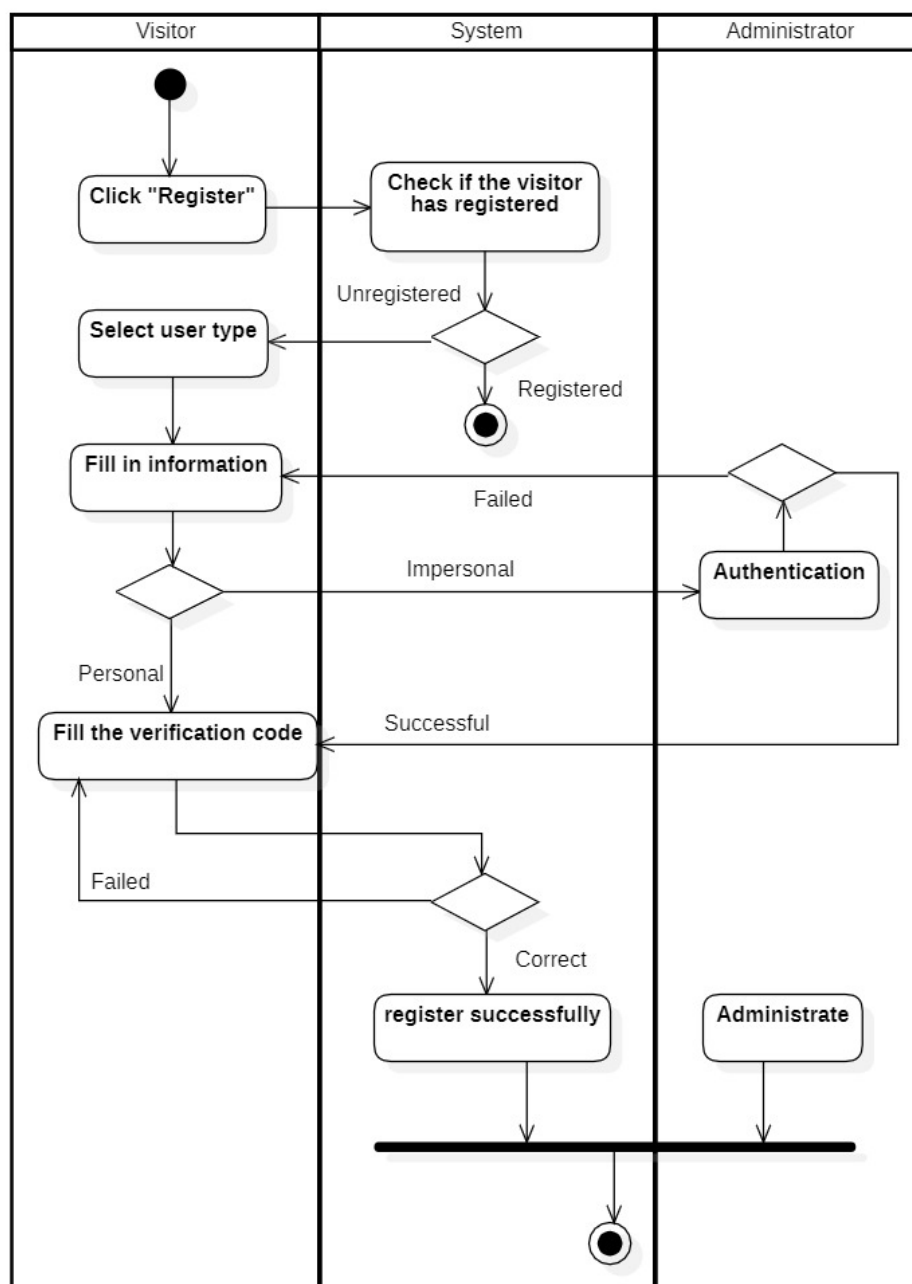

### 3. Purchase goods in the Health Mall

The User selects the goods and submits the necessary information, then pays for the goods he wants. The User will keep paying until he pays successfully and the money will be sent to the system and kept temporarily. Once the money has been sent, the system sends the information of the order to the store immediately, and the store begins to prepare the goods for the User. If anything is wrong during this section, the order will be cancelled by the system. Then the store should deliver the goods to the User and if the User is not satisfied with the goods or even doesn't get it, the after-sale service will be started. And if there is no agreement between the store and the User be reached, it needs the Administrator to judge and solve the problem.

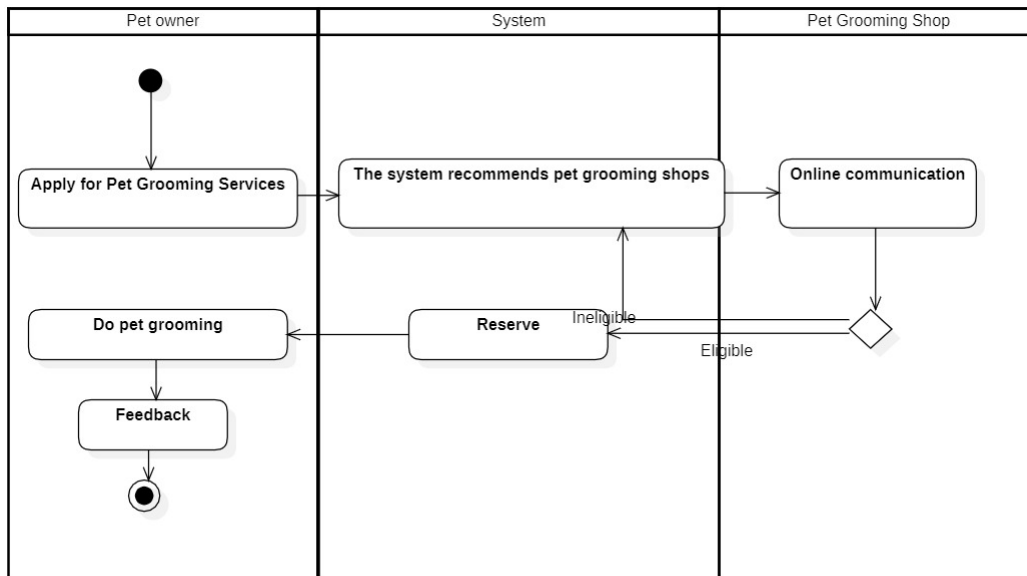

#### 4. Register

A Visitor who wants to register and be a registered user needs to be checked if he/she has been registered already by the system. Then the visitor has to fill in enough information and choose the user type. If it is a normal personal user, then filling in the verification codes is the last step. While if it is a store or doctor, the visitor must get through the authentication of the Administrator, and after that, fill the codes.

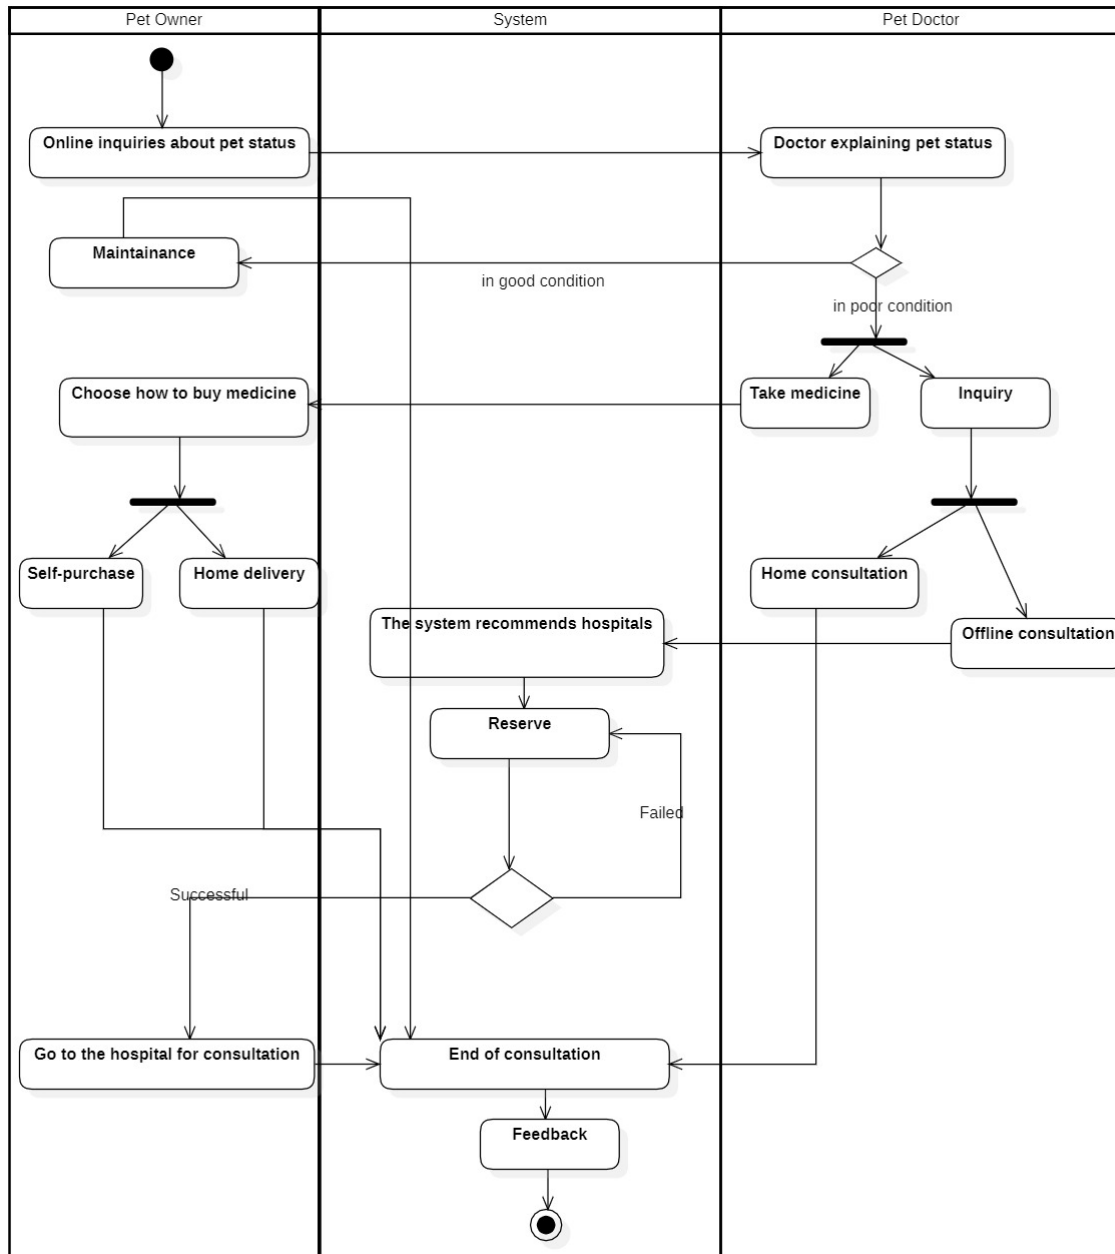

## 5. Pet grooming

When pet owners apply for pet grooming services, the system will recommend some pet grooming shops to pet owners. Pet owners can communicate with their favorite shops online. If pet owners are satisfied, they can make an appointment for the service and submit the service after doing pet grooming. feedback; if you are not satisfied, you can choose another pet grooming shop.

## 6. Pet medical

The pet owner consults online, and the doctor will inform the pet's condition. If the pet is in good condition, you can take care of yourself, the consultation is over and you can give feedback; if the pet is not in good condition, the doctor will suggest that the pet take medicine or consult a doctor. Pet owners can choose the method of purchasing medicine, and they can give feedback after the consultation. The consultation can be divided into on-site consultation and offline consultation. During the offline consultation, the system will recommend a pet hospital and have an appointment function. Submit feedback.

# 3 Glossary of Terms

Terms	Definition
Caregiver	Those who give pets care, including pet owners, pet societies or veterinarians.
Visitor	Unregistered users of the system lack a series of permissions.
Self-examination	The pet owner's pre-judgment of the pet's disease, by inquiring about the relevant information, or asking non-professionals to obtain a preliminary understanding of the pet's disease before seeing a veterinarian
Online-consultation	By describing the pet's condition to the online pet doctor, handing it over to the doctor to diagnose the pet's condition, and execute the relevant doctor's orders.
Health Mall	The shopping mall sells some pet related items, including some pet food and consumables.
Store	The mall is composed of many stores, and each store needs to pass the audit to sell goods.
Donation Project	A project issued to help animals in trouble raising funds, so that related specialists will do something for them.
Crowdfunding	Call on animal lovers to raise funds to take care of lost animals.
Pet Grooming	That is, pet cleaning, including bathing, shaving, beauty and other affairs
Disease Encyclopedia	Online pet disease atlas is used to help self diagnosis of diseases.

# 4 Supplementary specification

This part will render some supplementary information about our project.

## 4.1 Performance

---

- The average response time of the system should be controlled at tps 50/200 ms, and no longer than tps 50/1000ms;
- The whole product must support more than 20,000 ordinary users and 80,000 visitors simultaneously.
- When some extreme situations occur, like abrupt increase in traffic, or failure of service, the system can perform an automatic or manual downgrade according to key data.

## 4.2 Reliability

---

- The bugs per KLOC should be less than 10.
- The system should run at least 98% of the time.

## 4.3 Security

---

- Only the administrator has access to maintain data.
- Users should be authenticated with a name and a password, in case of hostile attack from others.

## 4.4 Maintainability

---

- The product ought to have excellent expandable ability, so that appending of new functions will be convenient.
- The product should attach importance to completion of data and back up data at a fixed frequency.
- When a fatal bug occurs, the product should be able to rollback to previous version within 3 hours.

## 4.5 Usability

---

- The product must ensure that ordinary users can get a grasp of this platform easily.
- Guarantee the system's fault tolerance, which means that this system won't crash even if the user operates incorrectly.
- Keep the conciseness and consistency of the UI. Meet the CUA standard of IBM.

## 4.6 Design Constraints

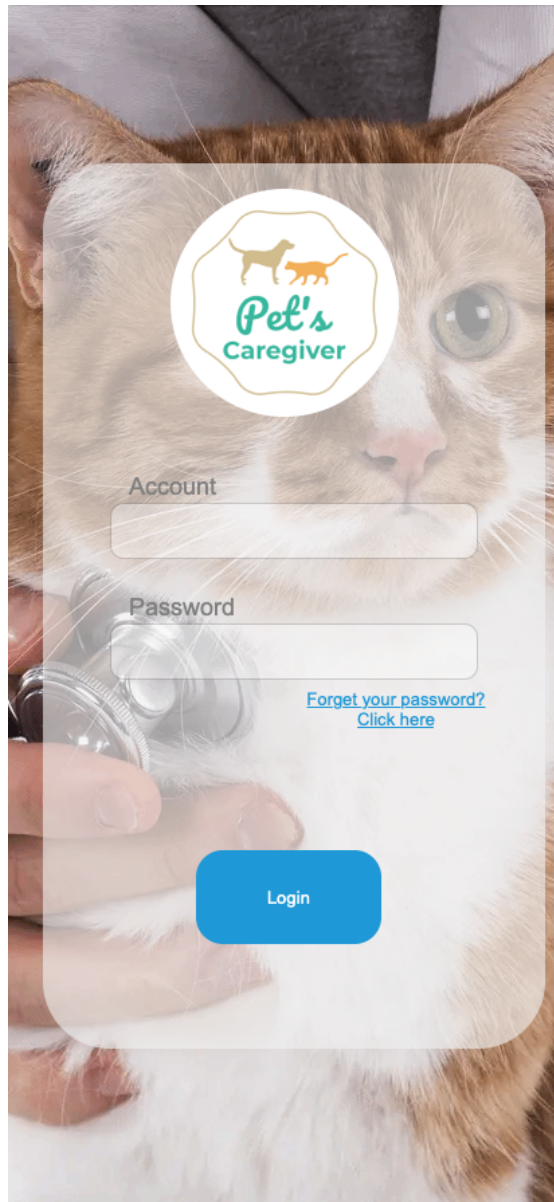

---

The product should have the ability to run across different platforms to guarantee its platform commonality.

# 5 Mock-up UI

## 5.1 Login In

If users haven't logged into the system. They have to register by email, or just enter visitor pattern.

A login form overlay on a background image of a ginger and white cat being examined with a stethoscope. The form is semi-transparent white with rounded corners. At the top is a circular logo with a dog and cat icon and the text 'Pet's Caregiver'. Below the logo are two input fields: 'Account' and 'Password'. To the right of the 'Password' field is a link that says 'Forget your password? Click here'. At the bottom of the form is a blue 'Login' button.

## 5.2 Main Page

On the main page, users can select various functions. The main function is diagnosis and treatment.

## 5.3 Medical Care

Before seeing the pet doctor, pet owners have to provide basic information about their pet and related symptoms. Then they select the pet doctor(vet). After that, they can ask doctors for diagnosis.

### 5.3.1 Pre-Inquiry

 线上问诊 — 宠物基本信息

## 宠物信息问卷

1、您的宠物种类

请填写

2、您的宠物年龄

请填写

3、是否绝育

☐是 ☒否

4、是否存在重大疾病史

☐是

若是，请填写具体疾病

5、请问宠物患的病是（若不知晓则空着）

请填写

疾病图鉴

6、请详细描述一下您宠物的病状

请详细描述宠物的病状

7、请上传宠物照片

# 6 List of References

[1]*Systems Analysis and Design: An Object-Oriented Approach with UML*, Sixth Edition

In this book, the author introduces the core skills required to plan, design, analyze, and implement information systems. Apart from simply reading it, students can also gain knowledge about UML in the book, with a variety of examples of how SAD concepts are applied in real-life scenarios.

[2]Wang Xuan, Gan Guojun, Wang Guanzheng, et al. *Analysis on the Creation of a Pet Medical Service Platform of "Pampering for Life" in the New Retail Era [J]. Brand Research*, 2020.

This article indicates some phenomena about the pet medical services in our country and gives a feasible application to alleviate the situation, which has significant referential value.

# 7 Contributions of Team Members

In the process of completing this task, all team members participated in the discussion actively and forged ahead to complete their tasks. Our team members cooperate harmoniously, communicate and solve problems in a timely manner when encountering problems. The division of labor within the group is even and clear as follows:

- Introduction: written by [Baokker](#)
- Use Case Modeling: The completion of this part is inseparable from the joint discussions and efforts of all team members. The detailed use cases and activity diagrams are written by [ssr123-ssr](#)(Medical System), [Lucas123912](#)(Communication System, Donate & Adopt System, and Crowdfunding System), and [JacksonW1025](#)(Me and Health Mall). The overall UML diagram is summarized by [Baokker](#).
- Glossary of Terms: written by [Gxyrious](#)
- Supplementary Specification: written by [Baokker](#)
- Mock: designed by [Gxyrious](#)
- List of references: written by [Baokker](#)
- The PDF cover is made by [Gxyrious](#)
- The final PDF is modified by [Baokker](#)
